SUMMARY

Full Stack Developer specializing in MERN Stack and Generative AI, with experience building scalable AI-powered web applications. Skilled in LLM integration, REST APIs, and modern frontend technologies, with a proven track record of winning hackathons and delivering production-ready software solutions.

EXPERIENCE

Software Engineer Intern September 2026– Present

OUTSET STUDIO, Remote

- Built and maintained modern web interfaces using Next.js, React, TypeScript, and Tailwind CSS.
- Implemented reusable UI components and responsive layouts to deliver consistent experiences across desktop and mobile devices..
- Integrated frontend components with backend APIs to support dynamic content, data handling, and interactive website functionality.
- Contributed to website deployment and production updates, resolving implementation issues and ensuring reliable functionality across environments.

SDE Intern August 2025– January 2026

ALPHANUMERIC IDEAS, Remote

- Improved website performance, accessibility, and SEO, leading to higher search engine rankings, increased visibility, and better user engagement.
- Optimized code, debugged issues, and ensured cross-browser compatibility for smooth functionality across devices.
- Collaborated with designers and developers in an Agile environment to deliver scalable, high-quality web solutions.
- Streamlined team workflows using GitHub version control, including branching, pull requests, and code reviews for maintainable development.

Full Stack Developer Intern October 2024–December 2024

EDUSKILLS FOUNDATION, Remote

- Developed dynamic, user-centric web applications by integrating front-end and back-end technologies, gaining hands-on experience in building scalable full-stack solutions.
- Built responsive and modular UI components using HTML, CSS, JavaScript, and React, enhancing user experience and interface performance.
- Engineered backend services with Node.js, Express.js, and MongoDB, enabling robust data handling and seamless API integration.

PROJECTS

HIREGUARD AI – Enterprise Candidate Verification System - ***Link***

- Built a multi-agent AI-powered Candidate Verification Platform leveraging LLMs to detect AI-generated and exaggerated resume content
- Integrated an LLM-based interrogation module to extract structured insights, validate skill claims, and compute a comprehensive integrity score
- Developed batch processing pipeline to analyze multiple resumes concurrently (async processing)
- Developed a secure and scalable backend using Node.js, Express, and MongoDB with JWT-based multi-tenant authentication and protected API architecture

KRISHIMITRA - AI Powered Agriculture Assistant - ***Link***

- Developed a full-stack AI platform to assist farmers with crop recommendation, disease detection and market price prediction
- Integrated Google Gemini API for multimodal AI (image + text) enabling real-time disease diagnosis with confidence scores
- Designed scalable backend with Node.js, Express.js, MongoDB, implementing REST APIs and JWT authentication
- Implemented market price forecasting using linear regression and real-time data visualization

STREAMIFY- Video Calling Chat App - ***Link***

- Developed a fully functional real-time communication platform featuring video calls (1-on-1 and group), instant messaging, and screen sharing, using the MERN stack and Stream API.

- Implemented JWT-based authentication with protected routes and session handling, ensuring secure and seamless user login flows.
- Added theme customization and multi-language support to enhance accessibility and user personalization.
- Utilized Zustand for efficient global state management and TanStack Query for optimized API data fetching and caching

INTERVIEW PREP AI - *Link*

- Designed a platform that leverages AI for interview prep, using React.js and OpenAI APIs to facilitate real-time, realistic Q&A sessions.
- Implemented JWT-based authentication and created interview flows that are tailored to each role, generating questions that fit a user's job profile and experience level.
- Integrated the Gemini API to enable AI-driven question and answer generation, which ensures that the technical content is consistently high-quality, accurate, and up-to-date.
- Built a responsive AI-powered interview preparation platform using React.js, Tailwind CSS, OpenAI API, Gemini API, and the Web Speech API with voice interaction and real-time feedback.

VIRTUAL R - *Link*

- Developed a top-notch VR rendering engine that's optimized for delivering smooth and immersive experiences, powered by cutting-edge web technologies.
- Built interactive virtual environments with lively elements, enabling users to dive in and engage with them in real-time.
- Ensured that our platform is compatible across various devices, from web and mobile to VR headsets, making it accessible to a wide audience.
- Using React.js, Tailwind CSS, and Lucide Icons, we've developed a contemporary, responsive user interface that enhances the experience of interacting with a virtual assistant in a VR setting.

SKILLS

Programming Languages	C++, Java, Python, JavaScript, Typescript, SQL
AI & Generative AI	Generative AI, Large Language Models (LLMs), LLM Integration, Prompt Engineering, Google Gemini API, OpenAI API
Full Stack Technologies	Reactjs, Typescript, Nextjs, Html, Css, Tailwind CSS, Material Ui, Expressjs, Javascript, MERN Stack, Shadcn, Nodejs, Framer Motion, REST APIs, JWT Authentication
Databases	MongoDb, MySQL, Firebase
Developer Tools	Git, Github, Docker, Postman

EDUCATION

Rashtrasant Tukadoji Maharaj Nagpur University — August 2023 - July 2027
Bachelor of Technology in Artificial Intelligence & Data Science

High School (12th) in Science — July 2021 - May 2023
Boys Junior College of Science, Akot

Secondary School (10th) in Science — June 2020 - May 2021
Boys Junior College of Science, Akot

ACTIVITY

Winner - TechAlpha Hackathon — February - 2026

- Secured 1st place among 100+ teams at TechAlpha Hackathon
- Developed a scalable AI-powered candidate verification system using MERN stack
- Delivered a real-time, production-ready prototype within 24 hours
- Presented the solution to judges, showcasing technical architecture, scalability, and real-world impact

Winner - Tech Knowledge 2k26 — April - 2026

- Won 1st Place among 50+ competing teams at the HackDay Hackathon.
- Integrated AI-based question selection to create balanced, syllabus-aligned, and difficulty-aware examinations.
- Leveraged the MERN Stack to build a secure, scalable, and responsive full-stack application within a 12-hour hackathon.
- Presented the AI-powered Exam Design Engine to the judging panel, demonstrating innovative system design, intelligent automation, and real-world educational impact
